

S-130, Firefighter Training, Self-Paced CD (Applies to January 2008 Version)

A bug in the log-in screen when using a .us extension had been discovered. For example, yourname@dnr.state.md.us generates a log in error. Using the federal format of yourname@fs.fed.us also generates a log in error.

Solution: Use an e-mail ending with .net, .org, .com, .gov, .edu, or .mil. Use anything but .us. This literally means you could add .com to any existing e-mail: yourname@dnr.state.md.us would become yourname@dnr.state.md.us.com

On the CD version, the e-mail log in isn't used for anything other than creating unique learner identifications on the student's computer. The lone purpose for the e-mail log in is ensuring the standalone version "remembers" that if two Joe Smiths happen to be taking the course on the same computer, their records will be differentiated.
